FINAL EXAMINATION
ADVANCE COMPUTER PROGRAMMING I

Performance Task: Build a Simple E-Commerce Website using HTML and CSS

Learning Competency:

Students will demonstrate their understanding of HTML structure and CSS styling by designing and developing a multi-page e-commerce website.

Task Description:

For this performance task, you will create a simple e-commerce website for a fictional online store. The website should showcase products, provide product descriptions, and allow users to navigate through different pages of the site.

Using HTML, you will structure the content of your website, and using CSS, you will style and enhance the visual appearance of your pages.

Your website must demonstrate your ability to use semantic HTML elements, links, images, lists, and CSS styling techniques.

Project Scenario:

Imagine you are a web developer hired by St. Paul University Dumaguete that wants to sell their bookstore products online. Your task is to create a simple prototype of their e-commerce website to show how their online store could look.

You may choose any store theme such as:

- SPUD Book Store
- SPUD School Supplies Store
- SPUD Food or Snack Store

Website Requirements

Your website must contain at least 4 webpages:

1. **Home Page (index.html)**

This page introduces the store.

Must include:

- Store name and logo
- Navigation menu
- Short store description
- Featured products
- Banner or hero image and etc.

2. Products Page

This page displays products for sale.

Must include:

- At least 10-15 products
- Product image
- Product name
- Product price
- Short description
- Organized using cards, tables, or grid layout

3. Product Details Page

This page provides more details about a selected product.

Must include:

- Larger product image
- Product description
- Price
- Product specifications (list)
- "Add to Cart" button (visual or functional)

4. Contact or About Page

This page provides information about the store.

Must include:

- Store background or mission
- Contact information
- Social media icons or links
- Contact form (Name, Email, Message)

HTML Requirements

Your website must demonstrate the correct use of headings, paragraphs, images, links, lists, tables or product layout, navigation bar, forms and proper HTML structure (<html>, <head>, <body>).

CSS Requirements

You must use CSS to style the website, including:

- Colors and backgrounds

- Fonts and text formatting
- Spacing (margin and padding)
- Borders
- Layout styling
- Navigation bar styling
- Product card or grid styling
- Hover effects for links or buttons

You may use either:

- Internal CSS
- External CSS (recommended)

Submission Requirements

Students must submit:

1. A folder containing all HTML files
2. The CSS stylesheet
3. Image assets used in the website
4. Screenshots of the website pages

Creativity Guidelines

Students are encouraged to:

- Use creative color palettes
- Design a unique store theme
- Organize products visually
- Use attractive layouts

RUBRIC

CRITERIA	POINTS
HTML Structure & CSS Styling (Proper HTML structure used correctly across all pages, consistent and well-applied styling)	30
Website Navigation (All pages properly linked and easy to navigate)	15
Content & Product Information (Complete product details with images and descriptions)	20
Layout & Design (Visually appealing, organized layout)	20
Creativity & Originality (Unique theme and creative presentation)	15
Total	**100 pts**
